

Managed/Restricted Access Fishery: Introduction & Initial Brainstorm
Break-out Groups Discussion Worksheet

This worksheet includes guiding questions to focus the discussion in your break-out group on the information that will be most useful for the Project and Administrative Teams to consider during the early stages of designing a *de minimis* (managed/restricted access) fishery option. Please encourage and provide space for all members of your group to share their ideas for each question, and complete one worksheet with agreed-upon responses that represent your group's discussion. Please also identify one member of your group to present the responses with the rest of the Project Team.

1. What are your priorities for the management of the recreational Red Abalone fishery? What are the potential benefits and challenges of a managed/restricted fishery?

Priorities (from highest to lowest priority)

1. _____

2. _____

3. _____

Benefits

1. _____

2. _____

3. _____

Challenges

1. _____

2. _____

3. _____

2. What data and information could be prioritized to inform the design of a restricted/managed access fishery? What, if any, concerns do you have about available data or information?

What data and information are readily available?

1. _____

2. _____

3. _____

What information is on your wishlist? (From highest to lowest priority)

1. _____

2. _____

3. _____

How can fishermen inform data collection efforts? (From highest to lowest priority)

1. _____

2. _____

3. _____

3. If a restricted/managed access fishery were to be implemented, what are your suggestions and supporting rationale for management strategies (e.g., bag limits, total allowable catch (TAC), size restrictions, etc.)?

Proposed management strategies (From highest to lowest priority)

1. _____

2. _____

3. _____
